

Ontrack® DataEraser™ Professional Version

Protect yourself from unintentionally sharing sensitive or confidential information

Are you donating, reusing or discarding personal computers?

Consider the information saved to the hard drive:

- Financial data
- E-mail
- Sales contact information
- Product development plans
- Marketing plans
- Trade secrets

Is this information you want to share?

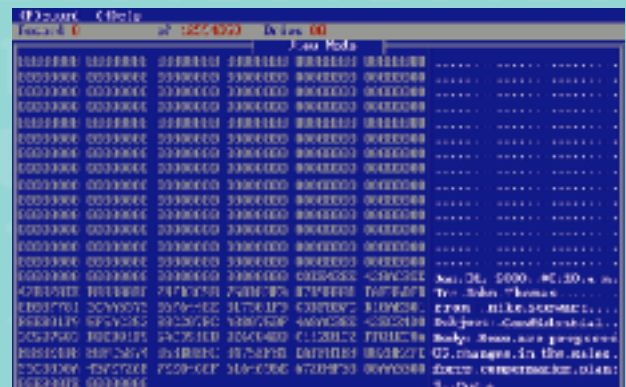

Data saved to your hard drive remains on the drive even after it is deleted, sent to the Recycle bin, or even after the drive is reformatted or repartitioned. Current data recovery products and services could recover confidential data eliminated by these methods. The data still remains on the media - only the pathways to the data are deleted.

DataEraser allows safe recycling of hard drive media without putting confidential information at risk.

DataEraser **actually overwrites** all of the data on your hard drive - so you can feel confident that sensitive information is eliminated. It's fast, flexible, easy to use, and best of all, DataEraser helps you maintain control of your confidential information.

Who needs DataEraser?

- Computer IT professionals
- Computer service or repair technicians
- PC leasing or recycling centers

Easy To Use

Boot up, set up, and go

DataEraser™ creates a self-bootable diskette that runs independently of the operating system allowing use on all IBM compatible PCs - and all operating systems.

Initiate the program with easy-to-use menu options. Once menu selections are complete, the overwriting process can run unattended, or you can monitor the progress through "Time Remaining" messages.

Flexible

Choose your drive

You can overwrite specified partitions of a drive, or overwrite the entire drive.

DataEraser is the only software with the ability to overwrite both ATA/IDE and SCSI drives.

Select your overwrite option

- 1) Single pass overwrite.
- 2) Triple pass overwrite meeting U.S. Department of Defense specifications.
- 3) Seven pass overwrite meeting German standards.
- 4) User defined number of overwrite passes (1 to 99).

Choose your pattern

You can define the desired final overwriting pattern, or choose the default pattern.

Fast

Watch it go!

DataEraser is designed for maximum overwrite speed.

Complete

Overwrite everything

DataEraser overwrites all data including partitions, folders, directories, files, file tables, dynamic drive overlays and boot record information.

It overwrites all viruses including boot sector viruses (when you choose to overwrite the entire drive).

DataEraser will overwrite the entire drive no matter what BIOS capacity limitation the system may have.

It is more complete than reformatting or repartitioning the drive, which only erases the pointer files for the data.

Reliable

Check the results

You can choose a complete verification or a quick verification, which verifies approximately one percent of the drive.

DataEraser produces a Validation Certificate that includes the drive model, serial number and a report of any bad blocks that could not be overwritten.

A view drive option offers a window into the drive to actually see the resulting overwrite pattern.

System Requirements

- AT compatible CPU chipsets with a minimum of 386 or greater processor
- 8 MB of RAM
- 1.44 MB floppy diskette drive
- EGA 640 x 480 or above graphics
- Hard drives must be SCSI or ATA/IDE (EIDE/Fast-ATA) drives that are attached in common controller methods. (Ontrack can not guarantee access to drives connected to proprietary IDE controller cards.)

Licensing Options

- Volume license (site license) for computer IT professionals or PC leasing or recycling centers.
- For more information on licensing and pricing visit our website: www.ontrack.com/dataeraser

Ontrack® DataEraser™ Personal Version

- Created for home PC users considering donating, discarding or returning leased PCs. Also ideal for users that wish to install a new operating system without interference from previous installations.
- Overwrites IDE drives with a single pass overwrite.
- Verification produces a dialog box reporting the results of the overwrite process.

For more information on DataEraser Personal Edition, visit the Ontrack web site: www.ontrack.com/dataeraser.

Sample Drive Performance	Drive Speed	Overwrite Speed per Pass*
ATA/IDE	5400 RPM	6.5 minutes/GB
ATA/IDE	7200 RPM	2.7 minutes/GB
SCSI-2	5400 RPM	2.7 minutes/GB
Ultra2 SCSI	10000 RPM	0.9 minutes/GB

*Your results may vary depending on your specific hardware configuration.
