

Unrivalled Data Protection for Mobile Devices

Ontrack® Eraser software for mobile devices - the world's leading mobile erasure application for those organisations who value data security.

Data Security Concerns with 3G Mobile Devices

With rapidly advancing operating and storage capabilities of mobile devices including: email, web browsing, streaming rich media, document viewing & editing capabilities, alongside traditional mobile applications, the implications of potentially sensitive data falling into the wrong hands is a very real business concern.

To help combat the threat to mobile device data security, many modern mobile devices incorporate an erasure command and factory reset function. However these features simply remove the memory index without erasing the actual data. Accessing this data is a relatively simple process for those with intent.

Providing Solutions for Your Needs

Here at Kroll Ontrack®, we realise the importance and value of electronically stored data, across every medium. Ontrack Eraser software for mobile devices complements the existing Ontrack Eraser products and services portfolio, and provides a solution for the two main instances where secure mobile device data erasure is essential: **the theft or loss of the device, and device disposal or refurbishment.**

Securing your Organisations' Data when a Device is Lost or Stolen

Thousands of mobile devices are lost or stolen worldwide every day. The inconvenience of mobile device loss or theft is secondary to the security of the potentially sensitive data stored within it. In the wrong hands the value of this data far outweighs the value of replacing the physical unit.

Ontrack Eraser software for mobile devices features a remote erasure command, issued by the Systems Administrator via SMS. The advanced security architecture of our software makes it impossible to abuse this option. An administrator can push an erase command even to the mobile device if the SIM-card is changed.

Permanent Deletion of End-of-Life Mobile Device Data

Reconditioning a mobile device for redistribution within your organisation, or for resale, is a cost effective and environmentally sound alternative to physically destroying or disposing of the unit. However, before the redistribution, the secure and complete eradication of the existing mobile device data is a must.

With a cable-based, centrally administered deployment option, Ontrack Eraser software for mobile devices can wipe devices quickly and cost-effectively, in-house, by administrators and assist in asset management.

Ontrack Eraser software for mobile devices Solution Credentials

Cutting Edge Data Disposal

Developed to emulate the same quality standards as our existing erasure solutions, Ontrack Eraser software for mobile devices provides a secure data erasure solution for mobile devices running the following operating systems:

- Symbian 9.x for Nokia S80 and S60 3rd Edition & 5th Edition
- Windows Mobile 6 Professional and Standard Editions

User Account security

Ontrack Eraser software for mobile devices features a simple erase-command management interface.

Erase management can either be handled remotely; through a web based application and SMS push technology, or via a cabled device connection and a Windows based application interface. Both deployment methods require an authorised user account, further increasing the security of the system. Unauthorised users with invalid credentials are unable to issue a potentially malicious erase command.

Extensive Reporting Capabilities

Advanced reporting capabilities are a key feature of the Ontrack Eraser software for mobile devices. All erasure activities undertaken are logged on a centralised server, allowing administrators to generate reports highlighting exactly which units have been wiped – whether remotely or in-house.

Flexible Licensing

Usage licenses are purchased 'as required'. Administrators only acquire device wipes as and when they are needed.
